DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to the device for fastening a distribution component on a neck, classified in class 215, subclass 274.
 - II. Claims, drawn to 8-9, classified in class 29, subclass 505.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions (I) and (II) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product, as claimed in claim 1, can be assembled through a different method than that claimed in claim 8. Specifically, claim 1 merely requires the external ribs come into fitting contact against the internal wall of the collar. The method of claim 8 limits the abutting of the ribs to radially displace the internal wall of the skirt inwards. The product could also be assembled in a method in which the ribs do not inwardly displace the internal wall of the skirt, but instead just come into fitting contact therewith.

3. A telephone call was made to Atty. Paul Odell on 05 March 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
